Student 2 Mohammed Freitekh (ID: 20180945)
Student 3 Ahmad Emad (ID: 20221059)
Student 4 Malik AlQurany (id:20210083)

....

Supervised By:

Sarah Tedmori

Project Submitted as a requirement of 12243-Web Page Design and Internet
Programming course - Computer Graphics and Animation department

Fall-2023/2024

Summary

Transform your online presence into a powerful sales tool with our expertise in creating visually stunning and highly functional websites. In an era where 82% of customers conduct thorough online research before reaching out, it's essential to ensure your website not only captivates but converts. Our passion lies in crafting beautiful websites that not only attract attention but also engage and retain customers for your small business. Let us help you make a lasting impression and turn curious researchers into satisfied buyers, enhancing your business's success in the digital landscape.

List of Abbreviations

UML:

JSP:

DLL:

CMS:

Table of Contents

The table of contents should be automatically generated by going to: *Insert >> Index And Tables>> Table of Contents*. Choose *Classic* as the format of the table and set the number of levels to be 3.

In order for the table of contents to be generated correctly:

- Each chapter title should be formatted using the style “Chapter”.
- Each section title should be formatted using the style “Section”.
- Each subsection title should be formatted using the style “Subsection”.
-

Table of Figures

The table of Figures should be automatically generated by going to: *Insert >> Index And Tables>> Table of Figures*. Choose *Classic* as the format of the table and set the tab leader to dots.

In order for the table of figures to be generated correctly, the label of each figure should be formatted using the style "Figure".

The table of figures should replace all of the text that is in this page.

Chapter 1

Introduction

1.1 Overview

Our project focuses on developing an advanced e-commerce platform tailored for small businesses, addressing the growing trend of consumers conducting online research before making purchases (82% according to recent data).

The significance lies in creating more than just an online presence; we aim to build visually appealing and highly functional e-commerce websites that attract and convert potential customers effectively.

1.2 Project Idea

The project revolves around the development of a specialized e-commerce platform catering to the unique needs of small businesses. In response to the prevalent trend of consumers conducting thorough online research before making purchases (as evidenced by an 82% engagement rate), our focus is on creating visually captivating and highly functional e-commerce websites. These platforms are designed not only to attract potential customers but also to optimize the conversion journey, transforming digital researchers into satisfied buyers.

1.3 Project Goal

The primary goal of our project is to empower small businesses with a powerful and effective online presence through the development of a specialized e-commerce platform. Our objective is to address the changing dynamics of consumer behavior, where 82% of customers conduct online research before making purchasing decisions. The project aims to create visually appealing and highly functional e-commerce websites that not only attract potential customers but also

streamline the conversion process, ultimately turning digital researchers into loyal buyers.

1.4 Document Outline

This chapter outlines the structure of the documentation and previews the content of each following chapter:

Chapter 2: Project Plan

Describes project deliverables, including source code, documentation files, executables, etc.

Outlines high-level tasks with a timeline.

Specifies roles and responsibilities of each team member.

Chapter 3: Project Design

Covers logo design.

Provides a detailed overview of the home page design, members' page design, validation design, database design, and reports design.

Chapter 4: Implementation

Lists programming languages, tools, and APIs used.

Gives an overview of implemented components, coding conventions, lines of code, and implementation aspects.

Chapter 2

Project Plan

2.1 Project Deliverables

Source Code:

The entire source codebase, comprising HTML, CSS, JavaScript, PHP, and SQL files, will be provided. This includes code for different pages such as home.html, contact-us.html, services.html, and individual team member pages.

Validation Design:

Detailed information on the design and implementation of form validation procedures.

Design Assets:

Graphic design assets, such as the logo created using Canva, that contribute to the visual identity of the website.

Database Engine: MySQL

2.2 Project Tasks

Subdivide the project into high level tasks and provide a timeline for the completion of each task. Tasks can be:

- Design
 - Logo Design
 - Home page (landing page) Design
 - Design of inner pages
 - Form design
 - Database Design
- Implementation
 - Coding (client and server technologies used for building the website)
 - Validation and any constraints to access some pages
 - Documentation (user manuals),

2.3 Roles and Responsibilities

Malek Al-Qurany:

Main Responsibility: Worked extensively on the JavaScript programming.

Collaboration: Collaborated with the team on overall project structure and design decisions.

Omar Al-Sughair:

Main Responsibility: Focused on designing and implementing the portfolio sections.

Collaboration: Contributed to HTML aspects of the project alongside Ahmad Emad and Malek Al-Qurany, and the cookies implementation and did the documentation.

Ahmad Emad:

Main Responsibilities:

Worked on the HTML and CSS components of the services page along with Omar Al-Sughair and Malek Al-Qurany.

Worked on the PHP implementation.

Collaboration: Collaborated with the team on the JavaScript functionalities, and cookies implementation.

Mohammed Freitekh:

Main Responsibility: Developed the Contact Us page.

collaborations : worked on the cookies implementation.

Chapter 3

Project Design

4.1 Logo Design

We used a website on google called Canva to design our logo.

4.2 Home Page Design

The header contains the website logo on the left, and a navigation menu on the right.

The navigation menu includes links for "Home," "Contact Us," and "Get a Service."

The main content section introduces team members, each with a profile picture, a role description, and a brief introduction.

Each team member has a "SEE MORE" button that likely links to a detailed profile page.

What We Do Section:

This section provides information about the services offered by your team.

It mentions the importance of having an effective website and offers services such as web design, logo design, internet marketing, SEO, and website support.

Services Section:

The services section elaborates on each service, accompanied by relevant icons.

Portfolio Section:

This section showcases your team's work with a grid of project images.

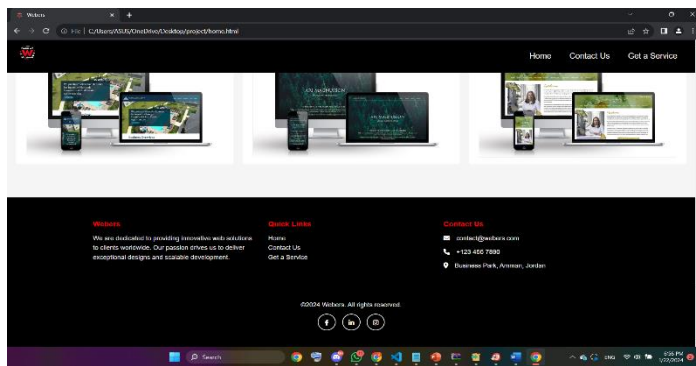

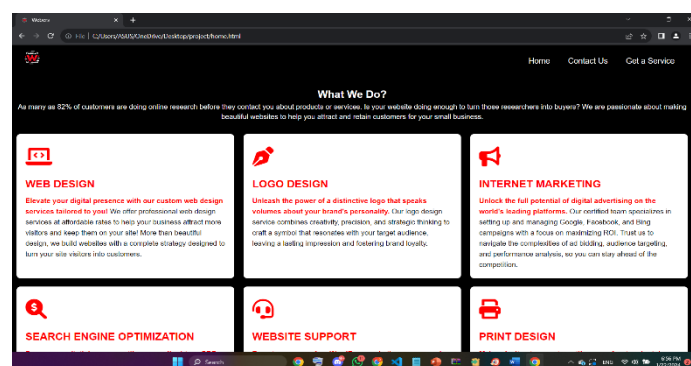

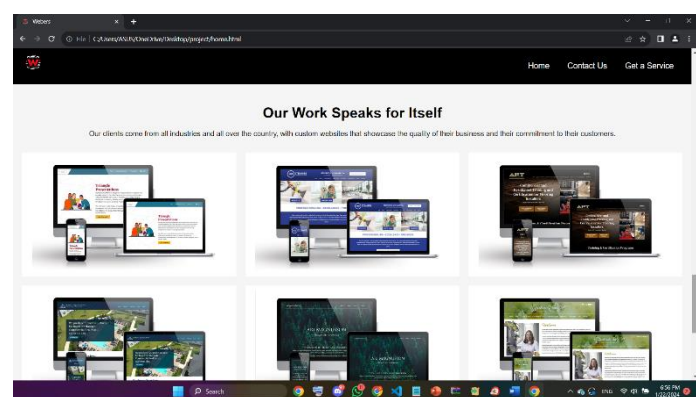

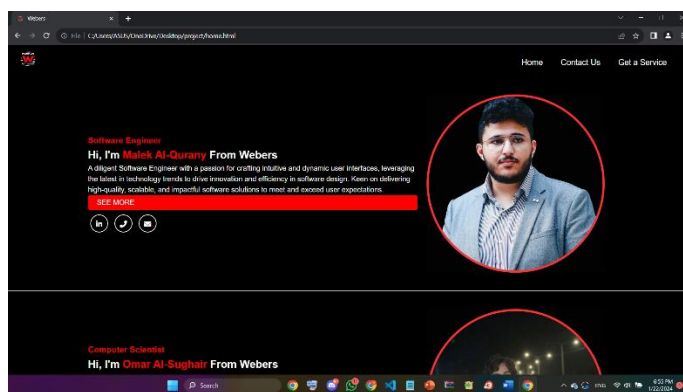

Each project image is a link that likely leads to more details about that specific project.

Footer Section:

The footer includes information about your company, quick links, and contact details.

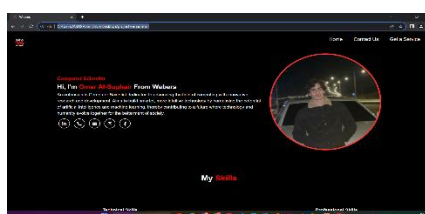

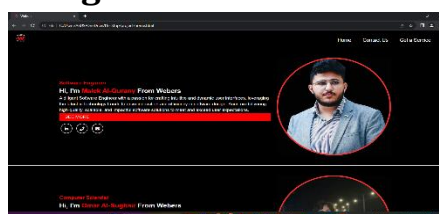

Social media icons are provided for Facebook, LinkedIn, and Instagram.

A copyright notice is present at the bottom.

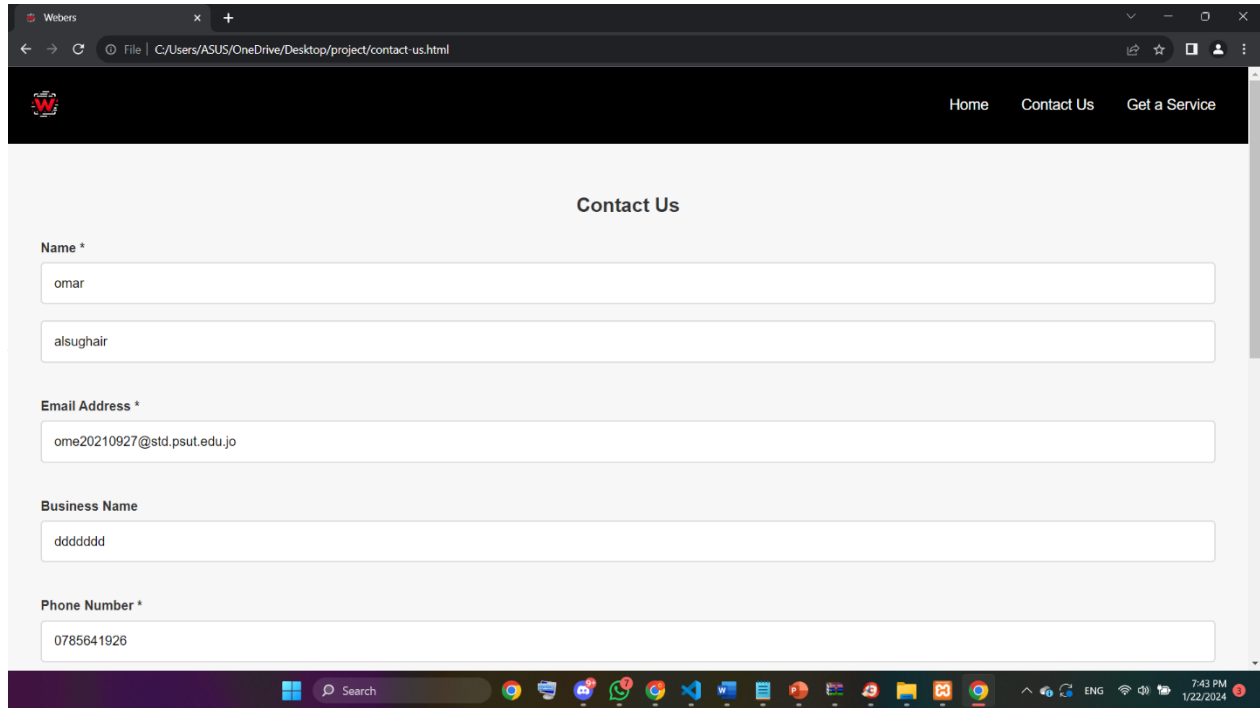

4.3 Members Page Design

All team members' pages share a consistent design, providing a unified look and feel throughout the website.

4.4 Validation Design

Example of a form filled correctly:

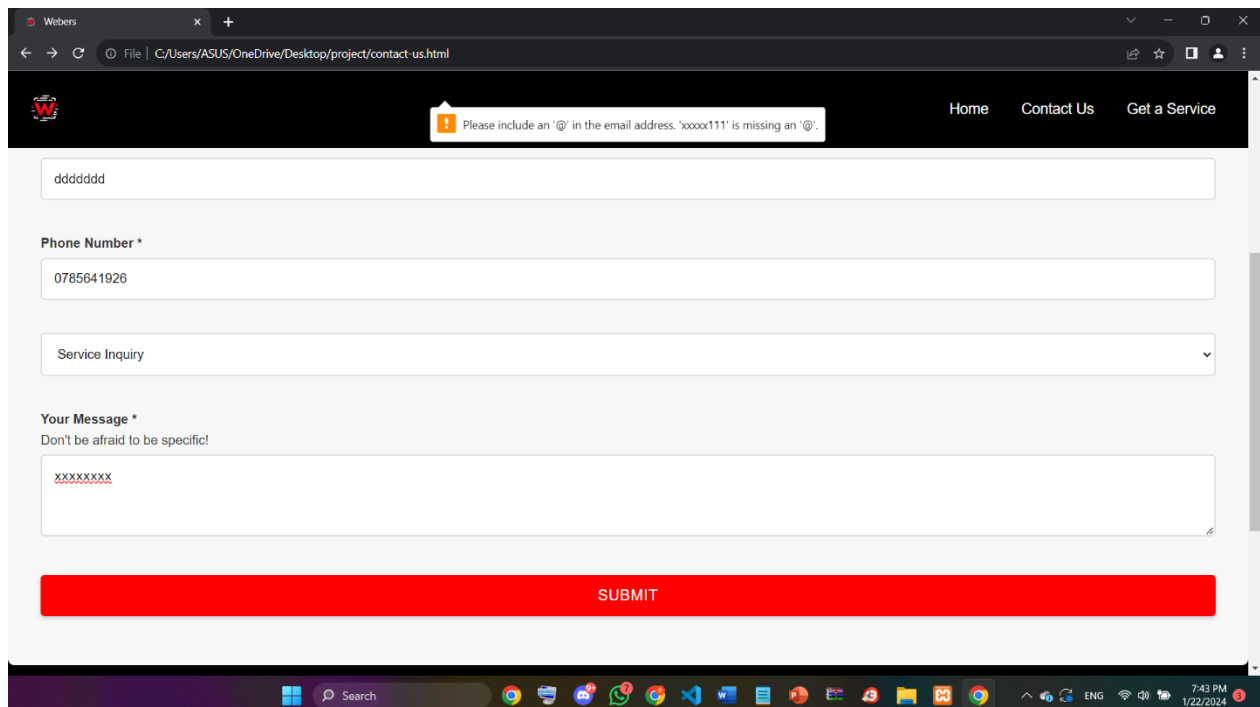

The screenshot shows a web browser window with the address bar displaying 'File | C:/Users/ASUS/OneDrive/Desktop/project/contact-us.html'. The page has a dark header with a logo on the left and navigation links 'Home', 'Contact Us', and 'Get a Service' on the right. The main content area is titled 'Contact Us' and contains a form with the following fields:

- Name ***: A text input field containing 'omar'.
- Email Address ***: A text input field containing 'ome20210927@std.psut.edu.jo'.
- Business Name**: A text input field containing 'ddddddd'.
- Phone Number ***: A text input field containing '0785641926'.

The Windows taskbar at the bottom shows the time as 7:43 PM on 1/22/2024.

If the form is not filled correctly a message will pop up saying :

The screenshot shows the same web browser window, but with a validation error message displayed in a yellow box at the top of the form area: 'Please include an '@' in the email address. 'xxxx111' is missing an '@'.'. The form fields are now:

- Business Name**: A text input field containing 'ddddddd'.
- Phone Number ***: A text input field containing '0785641926'.
- Service Inquiry**: A dropdown menu with 'Service Inquiry' selected.
- Your Message ***: A text area containing 'xxxxxxxx'.

Below the form fields is a large red button labeled 'SUBMIT'. The Windows taskbar at the bottom shows the time as 7:43 PM on 1/22/2024.

Programming Languages, Tools, and APIs Used:

The project utilizes the following technologies:

Languages: HTML, CSS, JavaScript, PHP, SQL

Tools: Visual Studio Code

Libraries/Frameworks: jQuery

Reasoning:

HTML, CSS, JavaScript: These are fundamental web development languages for structuring, styling, and adding interactivity to web pages.

PHP: Used for server-side scripting and handling form data.

SQL: Manages the database interactions.

jQuery: Simplifies JavaScript code and provides utilities for DOM manipulation

Overview of Implemented Components:

HTML Pages: There are multiple HTML pages, including home.html, contact-us.html, services.html, malek.html, omar.html, ahmad.html, and mohammed.html.

CSS Stylesheets: The styling is managed using external CSS files, hstyle.css and sstyle.css.

JavaScript: Inline JavaScript and a separate script.js file are used for interactivity.

PHP Scripts: PHP code for server-side processing and database interactions. Two PHP scripts handle form submissions.

SQL Queries: SQL queries for database operations. The number of queries would depend on the interactions within the PHP scripts.

Coding Conventions:

Consistent Naming: The variable and function names appear to follow a consistent naming convention, enhancing code readability.

Indentation and Formatting: The code is indented and formatted consistently, aiding in readability and maintainability.

Lines of Code:

It's challenging to provide an exact count without the entire codebase, but based on the provided snippets, it seems to be of moderate size, likely split across HTML, CSS, JavaScript, PHP, and SQL files.

Implementation Aspects:

Database Connection: The PHP code establishes a connection to a MySQL database using `mysqli`.

Form Handling: The PHP scripts handle form submissions, storing data in the database.

Responsive Design: The use of CSS and potentially additional responsive design techniques ensures a good user experience on various devices.

Chapter 5

Conclusions and Future Work

The project revolves around creating a website for "Webers," a team of professionals offering web design and development services. The website showcases the team members, their expertise, a portfolio of past projects, and details about the services provided. It also features a contact form for users interested in obtaining services.

Future work could involve continuous updates to the portfolio as new projects are completed, ensuring the website reflects the latest work undertaken by Webers. Additionally, considering the dynamic nature of web technologies, incorporating the latest design trends and technologies to keep the website modern and competitive would be beneficial.

Overall, the website effectively serves its current purpose, and future enhancements could focus on staying current with industry trends, expanding the portfolio, and maintaining a dynamic online presence.
